Unfriendly trade winds? Putting the selloff in perspective

Markets swooned worldwide amid a reignition of U.S.-China trade tensions and a sinking Chinese yuan. While the selloff was jarring, some perspective is in order. We believe investors should maintain equity positions as the U.S. economy is not in danger of an imminent recession, but volatility could persist.

After a one-month truce, the U.S.-China trade dispute has flared up again with another round of tit-for-tat trade restrictions and some heated rhetoric, impacting financial markets worldwide.

The latest trade barriers do not warrant making abrupt adjustments to equity portfolios, in our view, because the U.S. and global economies do not seem in danger of an imminent recession. The trade actions are actually smaller and more cautious than at first blush.

For investors with a 12-month or longer time horizon, we would hold U.S. equity exposure at the benchmark or Market Weight level in portfolios. Even though the expansion and bull market have lasted over 10 years, U.S. economic and equity fundamentals are relatively stable.

But the trade moves generate more global economic risks and uncertainties. The fact that this is occurring at a time when the recovery is admittedly long in the tooth can add to market volatility. A heightened level of vigilance is warranted.

Conflict in context

- **The new 10% U.S. tariff on \$300B in Chinese goods is a firm nudge, not a body blow.** We view this tariff largely as an attempt to exert psychological pressure on China. It raises the risk the White House could ultimately go all-in by hiking the tariff from 10% to 25% or more in the coming months, as President Trump has already threatened.

Major indexes are holding onto gains

Year-to-date equity returns through August 5

* The Canadian market was closed for a holiday on August 5, a day of declines for the global equity market, so performance for that index is captured through August 2. Source - RBC Wealth Management, Bloomberg; data through 8/5/19

On a practical basis, assuming the 10% tariff is implemented on September 1, China's economy could lose more steam, mainly due to uncertainties that even higher tariffs could be forthcoming, although the Chinese government and central bank still have levers to pull.

For the U.S., this new tariff is barely a blip on the radar screen. While prices of some consumer goods could rise modestly, the total impact would be

Investment and insurance products offered through RBC Wealth Management are not insured by the FDIC or any other federal government agency, are not deposits or other obligations of, or guaranteed by, a bank or any bank affiliate, and are subject to investment risks, including possible loss of the principal amount invested.

equivalent to a mere 0.1%—that’s one-tenth of one percent—of the \$21T U.S. economy, according to Tom Porcelli, chief U.S. economist at RBC Capital Markets, LLC.

- **China’s retaliation is more strategic and political than economic.** China is also applying psychological pressure. It countered the 10% tariff in two areas near and dear to Trump, by suspending agriculture purchases from the U.S. and allowing its currency to weaken. In our assessment, there is no path to Trump’s re-election without the farm states; we presume Chinese leaders understand this.

But here again, this move is unlikely to have a noticeable impact on the U.S. economy. Agriculture exports to China plunged by 54% from 2017 to 2018 due to previous tariffs, and yet the U.S. economy kept growing. For all of 2018, U.S. agriculture exports to China were less than a fraction of one percent of GDP. So we believe the broader economy can absorb further declines, although, unfortunately, the Chinese restrictions will continue to constrain some agriculture producers and farm states.

- **The “currency manipulator” designation is symbolism over substance.** For the first time in 25 years, the U.S. Treasury Department has designated a major trading partner as a “currency manipulator.” This fans the trade dispute flames and has already sparked “currency war” rhetoric, but it is unlikely to have much practical impact in the near term, in our view. This designation will prompt the U.S. to negotiate currency issues with China or pursue its case with the International Monetary Fund. The U.S. already has many tariffs and restrictions on China, and some of the penalties prescribed for currency manipulators don’t apply to China.

Treasuries flashing caution; other indicators not so much

We continue to view market-based and economic indicators as the best guides of long-term equity market performance.

As the 10-year Treasury yield plunged 35 basis points over four trading sessions to 1.71% on Monday, part of the Treasury yield curve became more inverted, with

short-term yields creeping higher than long-term yields by a greater magnitude. Recession risks have risen by this measure.

However, our other major U.S. recession indicators have yet to flash red or even yellow. Employment data, leading economic indicators, and the level of manufacturing new orders versus inventories are still signaling that GDP growth should persist for at least the next 12 months. In addition, consumer spending is elevated, confidence is high, and wages have been rising at a healthy clip for more than a year. This is notable because consumer spending drives almost 70% of U.S. economic activity.

One of our overriding concerns is that the longer the trade dispute persists, the higher the risk that consumer and business confidence will erode, which could shift the investment landscape.

It’s fundamental

As long as trade tensions don’t heat up to the degree that a global or U.S. recession becomes a credible threat, we think the equity market can work through this volatile period.

Corporate fundamentals are relatively stable with S&P 500 earnings growing slightly in the first half of the year on top of torrid growth in 2018. We think modest earnings growth will persist in the second half. We expect revenue growth to register in the mid-single-digit range in 2019, a respectable level on top of 8% growth last year. U.S. profits and revenues don’t rise in straight lines during expansion cycles, so we are not unduly troubled by slower growth rates this year.

The S&P 500 price-to-earnings ratio is somewhat elevated at 16.3x RBC Capital Markets’ 2020 earnings estimate of \$175 per share, but it is not so high that it would preclude gains.

While heightened vigilance is warranted, we believe it’s too early to become overtly risk averse by reducing overall equity exposure much lower than the long-term strategic recommended level. Accordingly, we continue to recommend a Market Weight or benchmark position in U.S. equities.

Disclosures and Disclaimer

Analyst Certification

All of the views expressed in this report accurately reflect the personal views of the responsible analyst(s) about any and all of the subject securities or issuers. No part of the compensation of the responsible analyst(s) named herein is, or will be, directly or indirectly, related to the specific recommendations or views expressed by the responsible analyst(s) in this report.

Important Disclosures

In the U.S., RBC Wealth Management operates as a division of RBC Capital Markets, LLC. In Canada, RBC Wealth Management includes, without limitation, RBC Dominion Securities Inc., which is a foreign affiliate of RBC Capital Markets, LLC. This report has been prepared by RBC Capital Markets, LLC, which is an indirect wholly-owned subsidiary of the Royal Bank of Canada and, as such, is a related issuer of Royal Bank of Canada.

In the event that this is a compendium report (covers six or more companies), RBC Wealth Management may choose to provide important disclosure information by reference. To access current disclosures, clients should refer to <https://www.rbccm.com/GLDisclosure/PublicWeb/DisclosureLookup.aspx?EntityID=2> to view disclosures regarding RBC Wealth Management and its affiliated firms. Such information is also available upon request to RBC Wealth Management Publishing, 60 South Sixth St, Minneapolis, MN 55402.

References to a Recommended List in the recommendation history chart may include one or more recommended lists or model portfolios maintained by RBC Wealth Management or one of its affiliates. RBC Wealth Management recommended lists include the Guided Portfolio: Prime Income (RL 6), the Guided Portfolio: Dividend Growth (RL 8), the Guided Portfolio: ADP (RL 10), and the Guided Portfolio: All Cap Growth (RL 12). RBC Capital Markets recommended lists include the Strategy Focus List and the Fundamental Equity Weightings (FEW) portfolios. The abbreviation 'RL On' means the date a security was placed on a Recommended List. The abbreviation 'RL Off' means the date a security was removed from a Recommended List.

Distribution of Ratings

For the purpose of ratings distributions, regulatory rules require member firms to assign ratings to one of three rating categories - Buy, Hold/Neutral, or Sell - regardless of a firm's own rating categories. Although RBC Capital Markets, LLC ratings of Top Pick/Outperform, Sector Perform, and Underperform most closely correspond to Buy, Hold/Neutral and Sell, respectively, the meanings are not the same because our ratings are determined on a relative basis.

Explanation of RBC Capital Markets, LLC Equity Rating System

An analyst's "sector" is the universe of companies for which the

analyst provides research coverage. Accordingly, the rating assigned to a particular stock represents solely the analyst's view of how that stock will perform over the next 12 months relative to the analyst's sector average.

Rating	Count	Percent	Investment Banking Services Provided During Past 12 Months	
			Count	Percent
Buy [Top Pick & Outperform]	772	53.57	215	27.85
Hold [Sector Perform]	588	40.80	114	19.39
Sell [Underperform]	81	5.62	2	2.47

Ratings:

Top Pick (TP): Represents analyst's best idea in the sector; expected to provide significant absolute total return over 12 months with a favorable risk-reward ratio. **Outperform (O):** Expected to materially outperform sector average over 12 months. **Sector Perform (SP):** Returns expected to be in line with sector average over 12 months. **Underperform (U):** Returns expected to be materially below sector average over 12 months. **Restricted (R):** RBC policy precludes certain types of communications, including an investment recommendation, when RBC is acting as an advisor in certain merger or other strategic transactions and in certain other circumstances. **Not Rated (NR):** The rating, price targets and estimates have been removed due to applicable legal, regulatory or policy constraints which may include when RBC Capital Markets is acting in an advisory capacity involving the company.

Risk Rating:

The **Speculative** risk rating reflects a security's lower level of financial or operating predictability, illiquid share trading volumes, high balance sheet leverage, or limited operating history that result in a higher expectation of financial and/or stock price volatility.

Valuation and Risks to Rating and Price Target

When RBC Wealth Management assigns a value to a company in a research report, FINRA Rules and NYSE Rules (as incorporated into the FINRA Rulebook) require that the basis for the valuation and the impediments to obtaining that valuation be described. Where applicable, this information is included in the text of our research in the sections entitled "Valuation" and "Risks to Rating and Price Target", respectively.

The analyst(s) responsible for preparing this research report have received (or will receive) compensation that is based upon various factors, including total revenues of RBC Capital Markets, LLC, and its affiliates, a portion of which are or have been generated by investment banking activities of RBC Capital Markets, LLC and its affiliates.
